e-Medsys EHR and the Pediatrics / Internal Medicine Practice: How Bruneau Family Care Manages Their Patient's Clinical Data!

The **Pediatrics** practice has very specific needs for automating the clinical side of the practice. The system must be able to quickly capture data during the encounter, keeping patient workflow at maximum levels.

e-Medsys EHR does exactly that: it allows the provider to maximize encounter efficiency by placing incredibly robust tools right at the provider's fingertips.

With **templates** based on **Visit Type (New Patient, Well, or Sick)** the provider can quickly access the scenarios needed for that particular visit. Family history is captured quickly, and medications, allergies, birth weight, condition at birth, feeding data, illnesses, immunization records, etc. are all easily input into the electronic chart.

Because **e-Medsys** supports **Handwriting Recognition**, the provider can make notations on electronic charts and diagrams, and **Voice Recognition** allows for quick input of dictated notes directly into the patient's record, eliminating costly transcription and the time-lag often associated with it.

The provider can order **lab tests via several major labs directly from the patient's e-Medsys EHR record** during the encounter. Once the results are ready, they are transmitted by the lab **directly back into the patient's record**, notify the practice at the same time, and with alerts for abnormalities.

Also during the encounter, the provider can **issue prescriptions from the patient's record** and have them transmitted electronically **directly to the patient's pharmacy**. At the same time, **e-Medsys EHR**'s **Prescription Management** capability will alert on **allergies, interactions and expirations**. The system has built-in **formularies** for prescribing based on the patient's insurance coverage.

Prescription Management allows for quickly issuing refills, and tracks all medications prescribed to patients should it be necessary to contact patients using certain medications.

Directly through the **e-Medsys EHR electronic superbill**, again as a routine part of the encounter, diagnoses, and procedures with their fees are automatically posted into the fully integrated **e-Medsys PM** for billing. No need for practice staff to post this information from a standard paper superbill. By the time the patient stops at the desk to leave, it's in!

e-Medsys EHR makes simplifies correct coding with our own, patented **E / M Coder** which prevents both undercoding and overcoding and helps to maximize reimbursements.

The built-in **Health Watcher** (also developed by **PracticeOne**) ensures continuity of care…that patients who need follow up care based on their medical condition are so notified, as is the practice.

Lara Bruneau, MD of **Bruneau Family Care**, a very busy **Pediatrics** and **Internal Medicine** practice in Edgewater, NJ could not operate without their **e-Medsys** solutions.

Dr. Bruneau relates "We've been using **PracticeOne's e-Medsys EHR** and **e-Medsys PM** for over four years and could not run our medical office without it. We rely on the systems for every aspect of our patient care, and we utilize so many of their features to run efficiently, with minimal staff"

Bruneau Family Care happens to utilize their **e-Medsys** solutions through our ASP format.

On that, **Dr. Bruneau** notes "The systems, being hosted by **PracticeOne**, are also a tremendous asset to our business in that format. We focus on caring for patients while **PracticeOne** keeps the systems running, backed up, and supported! It's about working smarter - not harder - and we've done that by partnering with **PracticeOne.**"

For **Bruneau Family Care**, ASP / SaaS *was* the best method to utilize their **e-Medsys** solutions. Your practice may be better suited to the Client / Server format.

PracticeOne stands ready to assist, and to offer suggestions in arriving at the format that works best for your practice.

Contact **PracticeOne** to schedule an overview or our **e-Medsys EHR**, and see how your **Pediatrics** or **Internal Medicine** practice can eliminate redundancy and drudgery with a high level of sophisticated automation.
